

Tutorial

How to send metafields to Amazon

First, use a product bulk editor

In this tutorial we will use
[Sheets for Shopify](#)

Please note that there are many apps allowing to edit metafields in bulk mode.

Major key points

- Unconditionally, you will have to create a model

Please refer to a product creation tutorial in the App > Help > Tutorial

- Field has to come from a metafield

The structure of metafield is; <namespace>::<name>, ie: amazon::title

- Your metafields are not imported automatically

You have to import your metafields from Action > Operations

	A	B
1	Product ID	Product Title
2	4458538336389	Apple AirPods with Charging Case (Latest Model)
3	4458578280581	Apple iPhone 8, 64GB, Gold - Fully Unlocked (Renewed)
4	4458562879621	Bose QuietComfort 35 II Wireless Bluetooth Headphones, No
5	4458656661637	GoPro Hero 8 Action Camera with Two Batteries, Two Sandis
6	4458610425989	Huawei P30 Pro 128GB+8GB RAM (VOG-L29) 40MP LTE F

Sample metafields in Sheets App

Update your products and metafields

The App imports your products every 4 hours, to do not wait, do it manually, you also have to import your metafields ;

The screenshot shows the 'Amazon Integration Plus' interface. At the top, there's a navigation bar with 'Dashboard', 'Connect', 'Workflow', 'Rules', 'Models', 'Actions' (highlighted), 'Reports', and 'Roadmap'. A search bar contains 'amazon-plus-prod' and a location dropdown is set to 'Amazon Europe'. Below the navigation, there's a sub-menu with 'Catalog', 'Orders', 'Operations' (highlighted), 'Scheduler', 'Feeds', and 'Failures'. A light blue informational box titled 'Manual operations' explains that tasks are normally automatic but can be triggered manually. Below this, a section titled 'Operation you need immediately' lists tasks for 'SHOPIFY' and 'AMAZON'. For each task, there is an 'Execute' button with a right-pointing chevron. A mouse cursor is hovering over the first 'Execute' button for the 'Full inventory import from Shopify' task.

Manual operations
All operations are triggered automatically by the scheduler. However, here, in case of need, you can for one task.

Operation you need immediately

SHOPIFY

- Full inventory import from Shopify > Execute
- Update inventory from Shopify > Execute
- Full metafields import from Shopify > Execute
- Check Shopify orders update > Execute

AMAZON

- Receive complete inventory from Amazon > Execute

Update the Model

If you don't know how to create a model, in the App, please refer to Help Center > Tutorials

In model, you will add attributes in that way;

Format is: `{{namespace::field}}`, you will enter it in default value

And repeat the operation for all fields you need.

Then your model will look like this:

Matching groups Models Overrides Mappings ?

Edit a model

Attributes i

Title (Title)	<input type="text" value="{{amazon::title_en}}"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>
Description (Description)	<input type="text" value="{{amazon::description_en}}"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>
Alternate Image1 (alternate_image1)	<input type="text" value="{{amazon::image_url1}}"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>
Alternate Image2 (alternate_image2)	<input type="text" value="{{amazon::image_url2}}"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>
Alternate Image3 (alternate_image3)	<input type="text" value="{{amazon::image_url3}}"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>
Material (Material)	<input type="text" value="Wood"/>	<input type="button" value="Remove"/>	<input type="button" value="Edit"/>

Send your products to Amazon

You will select the matching group (thus the model), which will contain a selection of products that you want to send to Amazon ;
